### DETAILED ACTION

1. Papers filed 01/06/06 have been entered. Claims 1-8 are present for examination.
2. The Information Disclosure Statement filed 01/06/06 has been considered.
3. The drawings are approved.
4. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Lamberg et al. (U.S. Patent Application Publication No. US 2004/0090120).

Regarding claim 1, Lamberg et al. discloses a backup circuit (figure 1) disposed between a digital circuit (6, 7) including a storage circuit and a power supply terminal (Vpp) for supplying power to said digital circuit, and including a backup capacitor (C3) for supplying a backup voltage to said digital circuit when the power is cut off, thereby holding information stored in said storage circuit, wherein said backup circuit includes devices (M3, M2, D3) which are capable of being formed by a standard CMOS process (paragraph [0025]), which are disposed between said power supply terminal (Vpp) and

said backup capacitor (C3), and which serve as resistors when the power is normally supplied to said power supply terminal, and as diodes each operating with a backward direction thereof defined as the direction from said digital circuit toward said power supply terminal when the power is cut off.

Regarding claim 2, Lamberg et al. teaches the backup circuit according to claim 1, wherein said devices are MOS transistors (paragraph [0025]), and gate terminals of said MOS transistors are connected to a ground potential (through R4 and M2).

Regarding claim 3, Lamberg et al. shows in figure 1, the MOS transistors (M1, M2) are connected in series in plural number.

### ***Allowable Subject Matter***

7. Claims 4-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to teach at least a shift means for shifting said digital circuit to a power low-consumption state when a voltage at said power supply terminal drops to a level not higher than a predetermined voltage.

### ***Conclusion***

8. The prior art made of record cited on Form PTO-892 is considered pertinent to applicant's disclosure.
